

1.

$$(1) \int_{-\infty}^{\infty} (2t+1)^2 \delta(t+1) dt = (2t+1)^2 \Big|_{t=-1} = 1 \quad (2) (t-1)\delta(-3t) = (t-1) \Big|_{t=0} \frac{1}{3} \delta(t) = -\frac{1}{3} \delta(t)$$

$$(3) F[\delta(-3t)] = \frac{1}{3} F[\delta(t)] = \frac{1}{3} \quad (4) F\left[\frac{\delta(t-2)}{(t^2+1)}\right] = F\left[\frac{1}{5}\delta(t-2)\right] = \frac{1}{5} e^{-i2\omega}$$

(5)

$$(6) F^{-1}\left[\frac{1}{2+j3(\omega-2)}\right] = \frac{1}{3} F^{-1}\left[\frac{1}{2/3+j(\omega-2)}\right] = \frac{1}{3} e^{-\frac{2}{3}t} e^{j2t} u(t)$$

$$(7) F^{-1}\left[\frac{1}{(1+j\omega)(2+j\omega)}\right] = F^{-1}\left[\frac{1}{1+j\omega} - \frac{1}{2+j\omega}\right] = (e^{-t} - e^{-2t})u(t) \quad (8) F^{-1}\left[\frac{\sin \omega}{\omega}\right] = \frac{1}{2} \text{rect}\left(\frac{t}{2}\right)$$

2.

$$(1) \mathcal{F}[\text{rect}(t)] = \text{sinc}\left(\frac{\omega}{2}\right) \text{ なるので、 } E(\omega) = \mathcal{F}[R(\tau)] = |\mathcal{F}[\text{rect}(t)]|^2 = \text{sinc}^2\left(\frac{\omega}{2}\right) = \frac{\sin^2\left(\frac{\omega}{2}\right)}{\left(\frac{\omega}{2}\right)^2}$$

(2)

(3) 問(1)の WK の定理の結果から、

$$\int_{-\infty}^{\infty} \text{rect}(t)\text{rect}(t-\tau) dt = \frac{1}{2\pi} \int_{-\infty}^{\infty} \text{sinc}^2\left(\frac{\omega}{2}\right) e^{j\omega\tau} d\omega$$

$$\tau = 0 \text{ とおくと、 } \int_{-\infty}^{\infty} \text{rect}^2(t) dt = \frac{1}{2\pi} \int_{-\infty}^{\infty} \text{sinc}^2\left(\frac{\omega}{2}\right) d\omega \quad \text{この式の左辺は1となるから、}$$

$$\therefore \int_{-\infty}^{\infty} \text{sinc}^2\left(\frac{\omega}{2}\right) d\omega = 2\pi$$

3.

(1) $x'(t) + 2x(t) = e^{j2t}$ 両辺をフーリエ変換して整理すると

$$j\omega X(\omega) + 2X(\omega) = 2\pi\delta(\omega - 2) \quad \therefore (j\omega + 2)X(\omega) = 2\pi\delta(\omega - 2)$$

(2)

$$X(\omega) = \frac{2\pi\delta(\omega - 2)}{2 + j\omega} = \frac{2\pi\delta(\omega - 2)}{2 + j2} = \frac{e^{-j\frac{\pi}{4}}}{2\sqrt{2}} 2\pi\delta(\omega - 2) \quad \text{フーリエ逆変換して、}$$

$$x(t) = \frac{1}{2\sqrt{2}} e^{j\left(2t - \frac{\pi}{4}\right)}$$

4.

(1) $2\sqrt{\log_e 2}$

(2) $\exp(-t^2) \exp\{-(t-\tau)^2\}$

(3)

$$\begin{aligned} R(\tau) &= \int_{-\infty}^{\infty} \exp(-t^2) \exp\{-(t-\tau)^2\} dt = \exp(-\tau^2) \int_{-\infty}^{\infty} \exp(-2t^2 + 2t\tau) dt \\ &= \exp\left(-\frac{\tau^2}{2}\right) \int_{-\infty}^{\infty} \exp\left\{-2\left(t - \frac{\tau}{2}\right)^2\right\} dt = \sqrt{\frac{\pi}{2}} \exp\left(-\frac{\tau^2}{2}\right) \end{aligned}$$

5. 最高周波数 f_m は 5kHz であるので、サンプリング間隔 T_s は

$$T_s = \frac{1}{2f_m} = 0.1[\text{ms}] \quad \text{以下でなければならない.}$$
