

## How to Obtain the Application Forms and Guidelines

(Note) This PDF file cannot be printed out and used for application.

This PDF file is for reference purposes only. If you wish to apply, please make sure to obtain the application guideline booklet (Japanese version only) and use the designated form included in the booklet.

### **[To pick up in person]**

The booklet is available at the counter in front of the Admissions Section, Student Support Office, Koganei Campus (1st floor of the Administration Building). Pick one up at your own discretion. (8:30 a.m. to 5:15 p.m. except weekends and holidays)

### **[To request by mail]**

If you wish to receive the booklet by mail, please send a self addressed envelope (A4 size) with stamps (320 yen for regular delivery or 620 yen for express delivery) attached to the address below. Please write "Request for Application Guidelines for the Master's Program of the Graduate School of Engineering" in red next to the address.

Please note that it may take some time before the application is sent. When requesting by mail, please allow sufficient time before the application period.

## Tokyo University of Agriculture and Technology Graduate School of Engineering Master Course Application Forms and Guide for October 2026/ April 2027 Enrollment

- (1) The following application guide and forms are intended for the Master's course. Applicants who wish to go Department of Industrial Technology and Innovation refer to another application guide and forms.
- (2) The University offers the International Specialized Program (English course) in each department. For those who wish to apply for the International Specialized Program, please read " The Screening of Admission Qualifications (12); Special Selection for the International Specialized Program " on pages 10-11 and " 5. International Specialized Program " on page 16. The application period, application procedures, and selection process are all different from other entrance examinations.

### 1. Application Quota

| Department                                  | Number of applicants to be accepted |                       |
|---|-------------------------------------|-----------------------|
|   | October 2026 Enrollment             | April 2027 Enrollment |
| Biotechnology and Life Science              | Several                             | 61                    |
| Biomedical Engineering                      | Several                             | 33                    |
| Applied Chemistry                           | Several                             | 54                    |
| Applied Physics and Chemical Engineering    | Several                             | 47                    |
| Mechanical Systems Engineering              | Several                             | 76                    |
| Electrical Engineering and Computer Science | Several                             | 86                    |
| Total                                       | Several                             | 357                   |

### 2. Admission Qualifications

#### Standard Selection

Applicants must meet one of the following qualifications:

- (1) Have graduated from a university; or are expected to graduate from a university before entering the Master Course.
- (2) Were conferred a bachelor's degree in accordance with Section 7, Article 104 of the School Education Act; or are expected to be conferred such a degree before entering the Master Course.
- (3) Have completed 16 years of school education overseas; or are expected to complete such a program before entering the Master Course.
- (4) Have completed 16 years of overseas school education by taking a correspondence course offered in Japan by an overseas school; or are expected to complete such a program before entering the Master Course.
- (5) Have completed a curriculum in an educational institution in Japan with curricula of an overseas university (only if completion of such curricula corresponds to completion of 16 years of school education in the pertinent country), which is regarded as an institution in line with the pertinent country's education system and is designated by the Minister of Education, Culture, Sports, Science and Technology, Japan; or are expected to complete such a curriculum before entering the Master Course.
- (6) Those who have received the degree corresponding to Bachelor from an overseas university or other school by completing three-year curriculum, including completion of a correspondence course offered by an overseas educational institute in Japan, or completion of a curriculum of an educational institute which is recognized as the institute having the curriculum of university in the overseas country and recognized according to the previous qualification. The university or the school should be accredited by the government or accreditation organization, or should be designated as an equivalent to the accredited university or school, regarding the comprehensive aspects of the education and research; or are expected to receive the degree before entering the Master Course.
- (7) Have completed a specialist course at a special technical school stipulated by the Minister of Education, Culture, Sports, Science and Technology, Japan after the date designated by the Minister; or are expected to complete such a course before entering the Master Course.
- (8) Are designated by the Minister of Education, Culture, Sports, Science and Technology, Japan
- (9) Are recognized on the basis of individual admission qualification screening that they have scholastic abilities equivalent to or higher than those of university graduates, and will be 22 years old or older on the first day of the month when they enroll.

### Special selection for third-year undergraduates

- (10) Are recognized by the Graduate School of Engineering as having acquired designated credits with excellent records, and meet any of the following criteria:
- Have enrolled for three years or more in a university as of March 31, 2027.
  - Have completed 15 years of education in an overseas school.
- (Those who expected to graduate in March 2027 for April 2027 Admissions are excluded.)

### Special selection for adults

- (11) Have working experience for over 1 year at research institution or education institution or company; or, have working experience for over 1 year and meet one of the (1)~(8) Qualifications at the time of application.

### Special selection for the International Specialized Program

- (12) Intend to study in the International Specialized Program and meet one of the (1)~(9) Qualifications.

#### Note:

- \*Individual admission qualification screening will be conducted for applicants applying as (9) of admission qualification. (See page8)
- \*Preliminary screening will be conducted for applicants applying as (10) of admission qualification. (See page9)
- \*Applicants who want to apply as (12) must contact your prospective supervisor at TUAT and obtain his/her approval before you apply. (See page 10-11)
- \*Applicants who meet all of the following criteria can be exempted from the written academic achievement test:
  - (1) or (2) of admission qualification, (1) or (2) of (11) of admission qualification
  - Are expected to graduate from a university by the end of March2027.
  - The Graduate School of Engineering is your preference.

Applicants who want an exemption from the written academic achievement test must tell your prospective supervisor at TUAT before you apply.

### 3. Application Deadline

June 1, 2026to July 16, 2026 (Except Saturdays, Sundays, and Holidays)

Hours: 9:00–12:00, 13:00–17:00

Note:

- ※Applicants who want an exemption from the written academic achievement test must apply from June1, 2026 to June 4, 2026.
- ※You cannot apply for both Standard Selection and Special Selection at the same time.
- ※Postal mail applications must arrive within the application deadline.

### 4. Application Procedure

In case you submit your application by post ,write “Enclosing application documents for the Graduate School of Engineering (Master Course)” on the front of the envelope in red. You also need to enclose a self-addressed N3 envelope with a 460yen stamp on the envelope (write your address with postal code and your name) to receive an admission voucher for examination.

If you do not receive the examination voucher by July 24, contact Admissions Section.

#### (1) Application documents

| Documents   | Notes  |
|---|--|
| Application Form; Photograph Voucher<br>(Designated form) | 1) An ID picture, without headwear, and taken within 3 months prior to application (4cm x 3cm) must be attached in the designated place.<br>2) Fill in the name of your expected research supervisor of the department to which you are (or may be) accepted and have him/her approval seal in the section Preferred Supervisor. (If there is no approval seal, you cannot apply.)<br>A faculty member who is not written in this guideline or a supervisor with the * 1 mark (P16-) cannot be a supervisor. |

|  |  |
|--|--|
| <p>Entrance examination fee (paid using provided payment slip designated by our Graduate School)</p> | <p>30,000 yen.</p> <p>Obtain the designated payment slip for the entrance examination fee at the counter of the Koganei Student Support Office, make your payment at the post office or JAPAN POST BANK, receive the <i>Certificate of Transfer Payment Receipt</i> with the stamp of the branch and date, and attach it on the designated place of <i>Payment Confirmation Slip of Entrance Examination Fee</i>. In addition, ensure to keep the <i>Transfer Payment Invoice and Receipt Slip</i>, as it acts as the receipt of your payment.</p> <p>*As payment of the entrance examination fee will be confirmed with the stamp of branch and date of the payment shown on the <i>Certificate of Transfer Payment Receipt</i>, make your payment only at a post office or Japan Post Bank. (Payments are not accepted via ATM transaction.)</p> <p>If you are applying from outside of Japan, you are advised to consult with your potential supervisor first. However, government sponsored foreign student should contact with Admissions Section as soon as extension of scholarship is confirmed.</p>   |
| <p>Payment Confirmation Slip of Entrance Examination Fee</p>   | <p>Attach the Receipt of the <i>Certificate of Transfer Payment</i></p>  |
| <p>Certificate of (expected) graduation</p>  | <p>A certificate of (expected) graduation issued by their universities (departments)</p> <p>Applicants with Application Qualification (10) or who are expected to graduate Tokyo University of Agriculture and Technology are not required for submission.</p>   |

## 5. Selection Procedures

The selection will be conducted comprehensively through academic achievement test (a written academic achievement test and an oral examination), an academic transcript, and score sheet for one of the English tests, or a business report or a performance report.

However, applicants who want an exemption from the written academic achievement test will be conducted comprehensively through both the oral examination and the academic transcript.

### (1) Admission for an exemption from the written academic achievement test

1) Applicants who wish to be exempted from the written academic achievement test will be judged by the academic transcript or a business report or a performance report.

For applicants exempted from a written academic achievement test will take an oral test.

Please note that you will take the written academic achievement test in case your request for an exemption of the test is disapproved.

2) Announcement for the result of qualification to be exempted from the written academic achievement test

Applicants who belong to Faculty of Engineering will be informed by each department on June 15.

Other applicants will be informed by postal mail send out on June 15.

3) Oral Test

Date: July 2, 2026 Place: Koganei Campus

Details will be notified to eligible applicants.

4) Announcement for the of an Oral Test result

Applicants will be informed by postal mail send out on July 10, 2026.

Please note that you will take the written academic achievement test in case you do not pass the oral test.

5) Announcement of successful applicants

September 4, 2026, at 1:30PM.

### (2) Entrance Examination by a written academic achievement test and an oral test

1) Subjects

| Department                     | Written test   | Oral test                           |

| Mechanical Systems Engineering              | Advanced subjects and study related to the desired major                               |                      |
| Electrical Engineering and Computer Science | Mathematics and advanced subjects and study related to the desired major* <sup>3</sup> |                      |

\*<sup>1</sup>Note: For the specialized subjects of the Department of Biomedical Engineering, questions are taken from biology, mechanics, electromagnetics, and electric circuits.

\*<sup>2</sup>Note: For the specialized subjects of the Department of Applied Physics and Chemical Engineering, select four subjects, including thermodynamics, from the following seven: thermodynamics, transport phenomena theory, reaction engineering, separation engineering, electromagnetics, quantum mechanics, and statistical mechanics

\*<sup>3</sup> Note: For the specialized subjects of the Department of Electrical Engineering and Computer Science, three questions (mandatory questions) will be asked.

(3) Location of the Entrance Examination (The written academic achievement test and the oral test)  
**Tokyo University of Agriculture and Technology. Koganei Campus**

\*Confirm the examination room in the “Entrance Examination Guide” sent or given at the time of application.

2) Date, Time and place (The written academic achievement test and the oral test)

|            | Time Table                                  | 18-Aug              |    |    |                                 |    | 19-Aug    |
|------------|---|---------------------|----|----|---------------------------------|----|-----------|
|            |   | 10                  | 11 | 12 | 13                              | 14 |           |
| Department | Biotechnology and Life Science              |                     |    |    | Life Science<br>12:30~15:00     |    | Oral Test |
|            | Biomedical Engineering                      | Math<br>10:00~11:00 |    |    | Advanced Subject<br>12:30~14:30 |    | Oral Test |
|            | Applied Chemistry                           |                     |    |    | Advanced Subject<br>12:30~15:00 |    | Oral Test |
|            | Applied Physics and Chemical Engineering    | Math<br>10:00~11:00 |    |    | Advanced Subject<br>12:30~15:00 |    | Oral Test |
|            | Mechanical Systems Engineering              | Math<br>10:00~11:00 |    |    | Advanced Subject<br>12:30~14:30 |    | Oral Test |
|            | Electrical Engineering and Computer Science | Math<br>10:00~11:00 |    |    | Advanced Subject<br>12:30~14:00 |    | Oral Test |

\*Enter and be seated at least 20 minutes prior to the test start time.

3) Special selection for adults

|            | Time Table                                  | 18-Aug              |    |    |                                 |    | 19-Aug    |
|------------|---|---------------------|----|----|---------------------------------|----|-----------|
|            |   | 10                  | 11 | 12 | 13                              | 14 |           |
| Department | Biotechnology and Life Science              |                     |    |    | Life Science<br>12:30~15:00     |    | Oral Test |
|            | Biomedical Engineering                      | Math<br>10:00~11:00 |    |    | Advanced Subject<br>12:30~14:30 |    | Oral Test |
|            | Applied Chemistry                           |                     |    |    | Advanced Subject<br>12:30~15:00 |    | Oral Test |
|            | Applied Physics and Chemical Engineering    | Math<br>10:00~11:00 |    |    | Advanced Subject<br>12:30~15:00 |    | Oral Test |
|            | Mechanical Systems Engineering              |                     |    |    | Advanced Subject<br>12:30~14:30 |    | Oral Test |
|            | Electrical Engineering and Computer Science | Math<br>10:00~11:00 |    |    | Advanced Subject<br>12:30~14:00 |    | Oral Test |

\*Enter and be seated at least 20 minutes prior to the test start time.

**6. Announcement of Successful Applicants**

Date: September 4, 2026 at PM1:30

The list of successful applicants will be shown on the TUAT website for 3 days.

The *Notice of Acceptance* will be mailed to successful candidates on the same day.

## 7. Admission Procedure

### (1) Date

For October 2026 Enrollment— September 11, 2026

For April 2027 Enrollment— March 16, 2027

Details of procedures will be announced to successful candidates later.

### (2) Required fees upon admission and others

1) Admission fee — 282,000 yen

2) Annual Tuition fee — 642,960 yen (321,480 yen each for the first and the second semester)

Note: Payment of tuition fees is required after entrance.

The fees set above are current and may be subject to change before the date of admission procedure. In addition, should the tuition fee change during enrollment, the new fee can be applicable upon amendment. Details on the payment of admission fee will be informed later.

When you entrance, you need to prepare expenses, for example, accident insurance designated.

### 3) Other required documents — Entrance Agreement (use provided form)

Working applicants who wish to enter the course while employed must submit the Entrance Agreement provided by persons such as the head of the department. Please note that if you are unable to submit the Entrance Agreement, your admission may be revoked.

## 8. Important Notes

- (1) Ensure to contact and obtain confirmation from your potential supervisor before you apply.
- (2) No signature (approval sign) of the potential supervisor in the application form, it cannot be filed.
- (3) Applicant for Collaborative field who do not have a chance to meet supervisors until the application, obtain an approval sign on the application form by sending post to the supervisor in advance. So you must prepare applications fairly early.
- (4) No part of any documents may be altered once application is submitted.
- (5) Should you violate any part of this Application Forms and Guide and instructions given by the university, you may be denied to take the examination.
- (6) Ensure to bring your Examination Voucher with you when you come for your examination.
- (7) In addition to writing materials, students may be required to bring a function calculator, straight ruler, etc. Check the “Entrance Examination Guide” sent or given at the time of application.
- (8) Applicant cannot use electronic devices like electronic dictionaries, mobile phones, smartphones and wearable devices.
- (9) In principle, applicants are not allowed to enter the examination room if 30 minutes or more elapsed since the start of the examination. Also, applicants are not allowed to leave the examination room within 30 minutes after the start of the examination.
- (10) Successful applicants of a special selection for third-year undergraduates should submit an academic transcript issued by their universities to Admissions Section, Koganei Student Support Office by the end of March, 2027.
- (11) If applying for exemption of admission/tuition fee and scholarship after enrollment, for upon the submission by the applicants and depending on the systems of the exemption of admission/tuition fee and scholarship, depending on the scholarship organization system, your academic transcript certificate of achievement which you submitted upon entrance exam application, and the result of your entrance examination may be used for consideration. Regarding personal information, acquired upon your application, your information will be adequately treated according to our Privacy Policy (available on the university website).
- (12) The examination fee is non-refundable, regardless of any reason.
- (13) No part of any potential department, division may be altered once application is submitted.
- (14) In principle, the delay of Chuo-line is considered as delay of transportation on the day of the examination.
- (15) In case a disaster occurs on the day of the examination or the day before, it will be notified on the following website.

<https://www.tuat.ac.jp/NEWS/>

- (16) Applicants who need special care due to disability (Prescribed in Article 22-3 of School Education Act), consult with an expected research supervisor and Admission Section, Koganei Student Support Office as soon as possible, before you apply.
- (17) In accordance with the “Foreign Exchange and Foreign Trade Act”, Tokyo University of Agriculture and Technology (TUAT) has established “Tokyo University of Agriculture and Technology Regulations for Security Export Control” and has been conducting strict screening of prospective students to be admitted into TUAT. In case a prospective student or the contents of his/her studies/research is subject to regulation as defined by the above-mentioned Act or Regulations, TUAT must apply to the Ministry of Economy, Trade and Industry (METI) of Japan for its permission to allow his/her enrollment in TUAT, and s/he may not be able to begin his/her studies or research immediately at TUAT for the time being. Furthermore, in case METI denies a TUAT’s application in order to maintain international peace and security, the prospective student may not be able to pursue his/her studies or research at TUAT as a result.

## **The Screening of Admission Qualifications (9)**

Qualification approval will be conducted as follows.

### **1. Documents for Submission**

- 1) Qualification Screening Application Form (provided form)
- 2) A personal history  
An academic background, business career, research career and social activities (provided form)
- 3) Statement of Purpose (free format; A4, about 500 words)
- 4) Others graduation research, project study or research report

### **2. Submission date, time and place**

Date: May 7, 2026 – May 8, 2026

Time: 9:00–12:00, 13:00–17:00

Place: Tokyo University of Agriculture and Technology. Koganei Campus  
(Admissions Section on the 1st floor of Administration Building (CUBE))

Note: Submission of your application by postal mail is accepted; please write on the address side of the envelope in red, “Enclosing application documents for the Graduate School of Engineering (Master Course)”

### **3. Date of Oral Examination**

May 14, 2026

### **4. The result will be send out by postal mail on June 5, 2026.**

# **The Pre-Screening of Admission Qualifications (10); Special Selection for Third-Year Undergraduates**

## **1. Documents for Submission**

- 1) Pre-Screening Application Form (provided form)
- 2) Academic Transcript issued by their universities (departments)

Applicants who are expected to graduate Tokyo Agriculture and Technology are not required for submission.

- 3) Statement of Purpose

Clearly state the general outline of the research you are currently conducting (wish to conduct), as well as why you wish to apply for the course. (Free format; A4)

- 4) Lecture notes or syllabus of Faculty/Department for Undergraduates

Applicants who are expected to graduate Tokyo Agriculture and Technology are not required to submit.

## **2. Submission date, time and place**

Date: May 7, 2026 – May 8, 2026

Time: 9:00–12:00, 13:00–17:00

Place: Tokyo University of Agriculture and Technology, Koganei Campus  
(Admissions Section on the 1st floor of Administration Building (CUBE))

Note: Submission of your application by postal mail is accepted; please write on the address side of the envelope in red, “Enclosing application documents for the Graduate School of Engineering (Master Course)”

3. The result will be send out by postal mail on June 5, 2026.

4. Successful applicant of “Special Selection for Third-Year Undergraduates” will have their undergraduate student status withdrawn. Please note that you will no longer be eligible to take state examination that requires Bachelor's degree.

Students can file with the National Institution for Academic Degrees and Quality Enhancement of Higher Education to undergo an assessment and pass an examination, should they seek to obtain a Bachelor's degree.

# The Screening of Admission Qualifications (12); Special Selection for International Specialized Program

Selection for applicants who apply as qualifications (12) shall be made as follows.

## 1. Application Requirements

Applicants must meet all of the following requirements (1) to (3).

- (1) Applicants must have an excellent academic record at their last graduated university.
- (2) Applicants are required to fulfill at least one among the following English proficiencies.
  - 1) A score of qualification or examination test equal to or more than B2 equivalent of Common European Framework of Reference for Languages (CEFR) in English.
  - 2) Applicants who completed the educational course that satisfies entrance qualifications for a Japanese graduate school master's course in English as the main language.
  - 3) Applicants who are recognized by our Graduate School of Engineering as having the English proficiency specified in 1) above.
- (3) Applicants must have a strong desire to study at the Graduate School of Engineering and be willing to enter the Doctoral course after completing the Master's course.

## 2. Application Procedure

Applicants must contact their prospective supervisor at least one month prior to the application deadline and obtain his/her approval before submitting the application. Applications submitted without the approval of the applicant's prospective supervisor will not be accepted.

### (1) Application Documents

|    |  |  |
|----|--|--|
| 1  | Application Form for International Specialized Program | Use designated form.   |
| 2  | Field of study and research plan                       | Use designated form.   |
| 3  | Statement of Purpose                                   | Use designated form.   |
| 4  | Research achievement                                   | Use designated form.   |
| 5  | Abstract of bachelor's thesis (or equivalent paper)    | Written in English on A4 size paper, no more than 600 English words.   |
| 6  | Certificate of (expected) graduation                   | A certificate of (expected) graduation issued by their universities (departments). Applicants who are expected to graduate TUAT are not required for submission.   |
| 7  | Academic transcript                                    | Academic transcript issued by their universities (departments) Applicants who are expected to graduate TUAT are not required for submission.   |
| 8  | Certificate of degree (expected)                       | Not required if the type of degree and date of conferment are clearly indicated on the certificate of (expected) graduation.   |
| 9  | Letter of recommendation                               | A letter of recommendation, by the dean or head of the applicant's affiliated institution. This letter must be addressed to the president of Tokyo University of Agriculture and Technology.                                     |
| 10 | Certificate for language skill                         | A certificate to prove that you meet the 1) or 2) of the Application Requirements (2). Those who are recognized by the University as meeting 3) of the Application Requirements (2) may be exempted from submission.             |
| 11 | Entrance examination fee (30,000 yen)                  | Applicants currently residing in Japan must pay using the payment form enclosed in the Japanese version of the application guidebook. Applicants outside Japan are advised to refer to their prospective supervisor for details. |

|    |  |   |
|----|--|---|
| 12 | A certificate of residence in Japan or a copy of the ID of the applicant's country of nationality (only for applicants with foreign nationality) | Applicants currently residing in Japan must submit a copy of their certificate of residence (showing nationality, status of residence, and period of stay), and applicants who have not yet arrived in Japan must submit a copy of a document that proves their nationality status in their home country (e.g. passport, family register, citizenship certificate, etc.). |
|----|--|---|

(2) Remarks

Download the designated forms for Application Documents 1-3 from the following URL, print them out on both sides of A4 paper, and submit them. The URL can be accessed from the QR code on the right.

[https://www.tuat.ac.jp/documents/tuat/admission/nyushi\\_daigakuin/youkou/2027\\_ISP\\_form.zip](https://www.tuat.ac.jp/documents/tuat/admission/nyushi_daigakuin/youkou/2027_ISP_form.zip)

All the documents should be written by Word Processor Software in either English or Japanese. In the case the document is not English or Japanese, attach the translation in English or Japanese with it. The submitted documents will not be returned.

(3) Application Period

From July 7, 2026 to July 16, 2026. (except Saturdays, Sundays, and holidays)

In case of sending by mail, the application must arrive by the end of the application period. Documents submitted outside the application period will not be accepted.

(4) Contact information for application submission and inquiries:

Admissions Section, Koganei Student Support Office, Tokyo University of Agriculture and Technology  
2-24-16 Naka-cho, Koganei-shi, Tokyo 184-8588  
TEL: +81-42-388-7014 Office hour: 8:30-12:00, 13:00-17:15

### 3. Selection Procedures

(1) First round selection (document screening)

In the first round of selection, applicants will be examined comprehensively based on the content of the submitted application documents. The result will be notified on July 24, 2026.

(2) Second round of selection (to be conducted only for applicants who have passed the first round of selection)

The second round of selection will be based on an oral examination. The examination will be held on August 19, 2026. The examination may be conducted online. Details will be provided only to successful applicants in the first round.

### 4. Announcement of Successful Applicants

The list of successful applicants will be shown on the TUAT website for 3 days from 13:30, September 4, 2026.

Notification of acceptance will be mailed to successful applicants on the same day. For those who have not yet entered Japan on the day, a copy of the acceptance notification will be sent as an electronic file, and the original will be delivered after the applicant arrives in Japan.

### 5. Admission Procedure

Admission procedure is the same as that for the Standard Selection. Refer to p.7.

### 6. Important Notes

(1) Applicants may not apply for both the Standard Selection and the Special Selection.

(2) If the oral examination for the second round is conducted online, the following items will be required, so prepare them in advance.

1) A bright, quiet room with no one other than the examinee alone.

2) An Internet access that enables stable video calls.

3) A device capable of making online video calls and chatting, equipped with a camera, microphone, speakers, and a screen large enough so that the interviewer's instructions can be seen.

(3) Other notes are the same as those for the Standard Selection on p.7, so check those as well.

## **Guide to the Master Course**

### **Graduate School of Engineering of Tokyo University of Agriculture and Technology**

#### **1. Education objectives**

The Graduate School of Engineering (Master's Program) accepts students from Japan and overseas who are interested in the natural environment and scientific technology and making efforts to improve themselves. They seek to broaden their vision and acquire thorough knowledge, and supported by a strong sense of ethics and personal autonomy, they want to become engineers and researchers who play an active role in international society. Recently, we have seen remarkable developments in science and technology, and ICT has become more sophisticated and advanced. We have also seen developments in border areas as well as in specialized comprehensive fields related to various specialized fields. These advances have been astounding, and in the Graduate School of Engineering we are engaged in a wide range of research and education from basic science and engineering to applied advanced technology designed to meet these kinds of current demands. Our goal is to foster researchers and specialists who have a wealth of imagination and creativity and can carry out wide-ranging, advanced research and development.

#### **2. Admission policy**

Aiming to develop individual students, the Graduate School of Engineering is looking for applicants who meet the following requirements:

- (1) Applicants who have a high level of ethics, sufficient basic academic knowledge of their field of study, and a broad view of their area of specialization.
- (2) Applicants who are on a quest to find truth in nature, have a manufacturing mindset, and are interested in science and technology. They should also be able to think independently in pursuing their research and cooperate and collaborate with others while being dedicated to solving research problems and contributing to society.
- (3) Applicants who are willing to take on the challenges facing humankind and can consider and judge from multiple perspectives and set their own research themes.
- (4) Applicants who have a high level of communication ability in Japanese or English.

#### **Department of Biotechnology and Life Science**

Our objectives are twofold: (i) to train students to acquire an international mindset, communication skills, and the ability to make presentations at domestic and international conferences and write technical papers and (ii) to develop human resources who, as experts in cutting-edge biotechnology, can act immediately in response to the needs of modern society while being active at the core of society as researchers, specialists, and professionals with the ability to discover new needs and seeds of new technologies. In consideration of these aims, we therefore seek people who satisfy the following admissions policy:

- (1) Applicants must have (i) sufficient basic academic skills in chemistry, life sciences, and engineering to study in the field of biotechnology and life science and (ii) the high ethical standards required of researchers and engineers.
- (2) Applicants must have an inquisitive mind for cutting-edge research in the field of biotechnology and be eager to contribute to society through interdisciplinary and international cooperation and collaboration.
- (3) Applicants must be able to (i) set research themes proactively through advanced expertise, analytical skills, and insight in the field of biotechnology and (ii) be willing to take on the challenges facing humanity boldly.

(4) Applicants must possess advanced communication skills in Japanese or English.

### **Department of Biomedical Engineering**

While aiming to give students the specialized knowledge related to the leading technology at the core of modern medicine, through collaboration with specialists from different fields, we aim to foster students who can acquire practical abilities based on biomedical innovation and develop as leaders in international society. As researchers, specialists, and professionals, these leaders can serve as bridges between various industrial fields and sow the seeds for developing the medical devices and health practices of the future. In consideration of these aims, we therefore seek people who satisfy the following admissions policy:

- (1) Applicants who have a high sense of ethics, basic academic knowledge and ability, and a broad desire to learn from biomedical engineering
- (2) Applicants who are on a quest to find truth in nature, have a manufacturing mindset, and are interested in biomedical fields. They also think independently while pursuing their research, can cooperate and collaborate with various researchers, engineers, and specialists who cross borders between disciplines, and are dedicated to solving research problems and contributing to society.
- (3) Applicants who are able to (i) consider and judge various problems facing humanity related to health, medicine, and sanitation from multiple perspectives, (ii) set their own research agenda, and (iii) be willing to boldly take on the challenge of research connected to the development of new fields of research, medicine, and healthcare technology.
- (4) Applicants who are highly skilled in communicating in Japanese or English.

### **Department of Applied Chemistry**

By teaching fundamental academic skills in chemistry and physics and conveying specialized knowledge in applied chemistry, materials science, and related fields, this program aims to foster highly skilled people who can (i) play leading roles in advancement of highly specialized science and technology as chemists and materials scientists working in fields related to nature, life, the environment, energy, and others, (ii) contribute to the formation of a safe and secure sustainable society, and (iii) play active roles internationally through their rich communication skills. In consideration of these aims, we therefore seek people who satisfy the following admissions policy:

- (1) Applicants should possess sufficient basic academic skills in chemistry and physics and related fields and meet the ethical standards necessary for researchers and engineers.
- (2) Applicants should be willing and able to create new value in regard to chemical substances from the atomic and molecular level and contribute to society and the world as experts in the field.
- (3) Applicants should be willing to set their own research agenda in the fields of chemistry and materials science related to nature, life, environment, energy, etc. and boldly pursue unexplored theories and development of new research areas.
- (4) Applicants should possess excellent communication skills in Japanese or English.

### **Department of Applied Physics and Chemical Engineering**

The objective of the master's program is to foster engineers and scientists who can contribute to the formation of a sustainable society and play an active role in society and on the international stage. In particular, students will gain the ability to solve problems related to energy, the environment, new materials and quantum technology through (i) their integrated understanding and application of expertise in chemical and physical engineering as well as (ii) their advanced professional leadership skills that will play a leading role in the field. In accordance with the above-described objectives of educational research and development of human resources, the Department of Chemical and Physical Engineering seeks students who satisfy the following requirements:

- (1) Applicants should have sufficient basic academic skills in chemistry, physics, mathematics, English, etc. for studying chemical engineering and physical engineering as well as a broad perspective and a strong sense of ethics.
- (2) Applicants should (i) be interested in research in the fields of chemical and physical engineering

related to energy, the global environment, medicine and food, resources and materials, quantum technology, or the process and measurement technologies that form the basis for solving problems in those fields and (ii) have a desire to contribute to society and the international community through activities in those fields.

- (3) Applicants should be able to (i) consider and judge various problems facing humanity from multiple perspectives by integrating and utilizing chemical engineering and physical engineering, (ii) set their own research agenda, and (iii) be willing to boldly take on the challenge of solving those problems.
- (4) Applicants should have excellent communication skills in Japanese or English languages.

### **Department of Mechanical Systems Engineering**

Based on a high level of fundamental analytical ability in mathematics and physics and a broad and deep expertise in mechanical-systems engineering, the goal of the department is twofold: (i) design and create unique and world-leading advanced mechanical systems to create a science-and-technology-driven society on a global scale that can develop sustainably in harmony with the environment and (ii) train advanced engineers and researchers who can work internationally with a deep understanding and insight into world society and culture through their rich communication skills. In consideration of these aims, we therefore seek people who satisfy the following admissions policy:

- (1) Applicants must have a broad perspective, sufficient basic academic skills for studying mechanical and systems engineering, and a high level of ethics.
- (2) Applicants must have (i) a high level of academic ability for applying oneself to cutting-edge research in the field of mechanical-systems engineering and (ii) a strong desire to contribute to humanity and society through international activities in their field of specialization.
- (3) Applicants must (i) have the ability to identify and solve problems based on advanced analytical skills, specialized knowledge, and insight in the fields of mathematics, physics, and mechanical-systems engineering and (ii) be highly motivated to take on research challenges in new and interdisciplinary research fields boldly.
- (4) Applicants must have advanced communication skills in Japanese or English languages.

### **Department of Electrical Engineering and Computer Science**

The aims of this program are twofold: first, to train students to acquire advanced technologies and related expertise in information engineering and electrical and electronic engineering, which support the foundations of modern society and, second, to train advanced IT engineers and researchers who can (i) explore and devise new technologies in electrical engineering and computer science in accordance with social needs and (ii) work internationally with advanced R&D capabilities created through collaboration with those having different specialties. In consideration of these aims, we therefore seek people who satisfy the following admissions policy:

- (1) Applicants must have acquired sufficient basic knowledge and ethics in information engineering, electrical and electronic engineering, and basic science and engineering subjects.
- (2) Applicants must (i) be interested in research in the fields of information engineering and electrical and electronic engineering and (ii) have a strong desire to contribute to society and the international community through activities in those fields.
- (3) Applicants must (i) have the ability to identify and solve problems on the basis of their expertise in information engineering and electrical and electronic engineering and (ii) be willing to take on challenges in new research areas.
- (4) Applicants must have excellent communication skills in Japanese or English languages

## **3. Organization**

The Graduate School of Engineering consists of a Master's Course and a Doctoral Course.

Master's course consists of 6 departments; "Biotechnology and Life Science", "Biomedical Engineering", "Applied Chemistry", "Applied Physics and Chemical Engineering", "Mechanical Systems Engineering", "Electrical Engineering and Computer Science", and each department corresponds to a specialized research field that contributes to today's leading-edge science and technology. Each of the departments in the Master's Course corresponds to the six departments that comprise the

Faculty of Engineering and the six departments that comprise the Doctoral Course, respectively, creating an education and research system that is consistent from the undergraduate to the Doctoral Course.

The Graduate School of Engineering also has a Department of Industrial Technology and Innovation that aims to cultivate Research and Development capabilities and technology management through advanced engineering research. For further information, please refer to Industrial Technology and Innovation guidelines and forms.

#### 4. Certification of Course-Completion and Degree Conferral

In principal, students who meets all of the following criteria will be conferred Master Degree (Technology or Academic).

- 1) Enrolled in the Graduate School of Engineering for 2 years or more
- 2) Earn 30 credits or more in each department.
- 3) Approved thesis for degree, and passed the final examination.

#### 5. International Specialized Program

International Specialized Program (English course) has been established in each department. In this program, all lectures are conducted in English. Professors listed in this guide are also members of the International Specialized Program.

Information about planned admission for International Specialized Program (English course) is included in 1. Application Quota. For details on application requirements, application procedures, selection procedures, etc., refer to "Special Selection for International Specialized Program" on pages 10-11.

#### 6. Main contents of research of Academic Advisor

| Department : Biotechnology and Life Science |   |   |
|---|---|---|
| Specialty & Major Research Fields           | Academic Advisor  | Research Subject  |
| Cell engineering                            | Mikako SAITO<br>mikako(at)cc.tuat.ac.jp                                 | Disease model cells of diabetes.<br>Regenerative cell engineering. ES cells.<br>Single-cell gene engineering. Femtoinjection.<br>Food safety control and regulatory science.  |
| Applied Microbial Engineering               | Tetsushi MORI<br>moritets(at)go.tuat.ac.jp                              | Exploitation and elucidation of the characteristics, role and molecular traits of novel/uncultivable environmental microorganisms using molecular biology based approaches.   |
| Biomolecular and structural informatics     | Yutaka KURODA<br>ykuroda(at)cc.tuat.ac.jp<br>*Retires in March 2027     | Biophysical and bioinformatics studies of protein/peptide aggregation, function, and immunogenicity at atomic/molecular level using recombinant DNA technologies, NMR, X-ray crystallography, and computational simulation. |
| Biomaterials Engineering                    | Yasumoto NAKAZAWA<br>yasumoto(at)cc.tuat.ac.jp                          | i) Structural analysis of silk fibroins.<br>ii) Development of the medical implantation devices such as artificial cardiac valves and cardiovascular patches based on the silk fibroin.                                     |
|   | Keiichi NOGUCHI<br>knoguchi(at)cc.tuat.ac.jp<br>(Collaborative faculty) | Structure analysis of bio-related molecules using X-ray diffraction, nuclear magnetic resonance, mass spectroscopy and electron microscopy methods.   |

| Department : Biotechnology and Life Science |   |  |
|---|---|--|
| Specialty & Major Research Fields           | Academic Advisor  | Research Subject   |
| Molecular biology and pathophysiology       | Yoshihiro OHTA<br>ohta(at)cc.tuat.ac.jp<br>*Retires in March 2028     | Development of novel techniques for organelle imaging and their application to mitochondrial study. Cell death, Ca <sup>2+</sup> signaling and generation of reactive oxygen species are mainly focused.   |
|   | Masaki INADA<br>inada(at)cc.tuat.ac.jp                                | Molecular pathological investigation using gene targeted mice and disease models on mice.  |
|   | Michiko HIRATA<br>hirata(at)cc.tuat.ac.jp                             | Molecular pathology is investigating that based on gene editing techniques in molecular biochemistry. Focusing fields are development of drug screening models and diagnostic-imaging methods on life related diseases and skeletal disease including osteoporosis, periodontal disease and its related cancers.   |
| Nanobiotechnology                           | Kazunori Ikebukuro<br>ikebu(at)cc.tuat.ac.jp                          | Nucleic acid engineering of aptamers for the application to diagnosis and novel bottom-up nanotechnology.  |
| Molecular Immunoengineering                 | Ryutaro ASANO<br>ryutaroa(at)cc.tuat.ac.jp                            | Artificial protein design based mainly on antibody molecules and their detailed functional analyses for development of next-generation biologicals and biosensors.   |
| Biobusiness                                 | Wakako TSUGAWA<br>tsugawa(at)cc.tuat.ac.jp<br>(Collaborative faculty) | Development of novel biodevices for the in vitro diagnostics and environmental monitoring systems based on proteins or enzymes.  |
| Molecular Biochemistry                      | Ryuji KAWANO<br>rjkawano(at)cc.tuat.ac.jp                             | The goal of my research is to establish a system that uses biological nanopores for single-molecule detection. Channel membrane proteins have nanochannels around 1 nm in size. These biological nanopores are capable of detecting and electrically recognize even single molecules with a high signal-to-noise ratio. However, the channel size is limited by the inherent protein structure. I plan to develop artificial nanochannels such as synthetic nanopores or polypeptides combined with biomaterials (proteins and lipid bilayers) on the basis of MEMS technology for novel nanopore sensing. |
| Plant biotechnology                         | Akiyo YAMADA <sup>*1</sup><br>yamaden(at)cc.tuat.ac.jp                | Molecular biological analysis of the genes based on the function of the proteins related to salt-tolerance phenotype of the halophyte.   |
| Marine Biotechnology                        | Tsuyoshi TANAKA<br>tsuyo(at)cc.tuat.ac.jp                             | Production of biofuels, chemicals and pharmaceuticals on the basis of biological functions of various microorganisms. Development of Bio-sensing system based on lab-on-a-chip technologies.   |

| <b>Department : Biotechnology and Life Science</b>                   |   |  |
|--|---|--|
| Specialty & Major Research Fields                                    | Academic Advisor  | Research Subject   |
| System Genomics  | Kosuke KATAOKA<br>kataokak(at)go.tuat.ac.jp                         | Multi-omics and behavioral analysis using deep learning toward elucidating the molecular mechanisms of biological diversity and environmental adaptation in insects and microalgae. Development of novel bioresources based on the insights gained from adaptive strategies and diversity generation processes.  |
| Biomolecular engineering   | Atsushi ARAKAKI<br>arakakia(at)cc.tuat.ac.jp                        | Molecular analysis of biomineralization mechanism. Biomimetic synthesis of organic/inorganic hybrid nanomaterials using biological molecules.  |
|  | Tomoko YOSHINO<br>y-tomoko(at)cc.tuat.ac.jp                         | Development of novel bio-nanomaterials through genetic engineering by microorganisms for biosensing and biomedical applications.   |
| Bioelectronics   | Takahiro ICHIKAWA<br>t-ichi(at)cc.tuat.ac.jp                        | Lipid molecules form bilayer structures that play an important role as a field for various functional biomolecules. In our laboratory, we aim for the construction of novel fields by controlling self-organization behavior of amphiphilic molecules.   |
| Synthetic organic chemistry<br>Bioorganic chemistry/chemical biology | Kazuo NAGASAWA<br>knaga(at)cc.tuat.ac.jp<br>(Collaborative faculty) | Total synthesis of biologically active natural products. Development of organocatalyst.  |
|  | Kaori SAKURAI<br>sakuraik(at)cc.tuat.ac.jp                          | Our research group explores the field of chemical biology by integrating organic synthetic chemistry and nanoscience, focusing on motifs derived from peptides, glycans, and natural products that exhibit novel anti-cancer activities. Using chemical probes for target protein identification, we aim to modulate protein functions and elucidate the molecular mechanisms underlying anti-tumor effects. |
|  | Masayuki TERA<br>tera(at)go.tuat.ac.jp                              | Design and synthesis of functional molecules controlling nucleic acids, proteins, and cellular surfaces.   |
| Medicinal enzyme engineering   | Christopher VAVRICKA<br>chris(at)go.tuat.ac.jp                      | Computationally-driven enzyme engineering can now enable the sustainable biosynthesis of virtually any desired chemical product. Therefore, we are developing computational approaches for the discovery and engineering of specialized enzyme functions that can extend metabolic pathways to produce valuable medicinal compounds.   |
| Biolinguistics   | Yuji HATAKEYAMA<br>hatayu(at)cc.tuat.ac.jp                          | Syntactic structure, semantic structure, and information structure.  |

| <b>Department : Biomedical Engineering</b> |   |  |
|--|---|--|
| Specialty & Major Research Fields          | Academic Advisor  | Research Subject   |
| Biomedical nanodevices                     | Kenzo MAHASHI<br>maehashi(at)cc.tuat.ac.jp                            | Development of biomedical electronic nanodevices for early diagnosis and for realization of safe and secure society. Nanocarbons are expected for fabrication of devices owing to their unique structures and superior electrical properties. In this department, biological sensors and quantum devices are developed.  |
| 3D image technology                        | Yasuhiro TAKAKI<br>ytakaki(at)cc.tuat.ac.jp<br>*Retires in March 2028 | Holographic displays and light field displays which naturally satisfy human depth perception without any contradiction are developed to realize next-generation head-mounted displays and glasses-free 3D displays used for VR/AR technology and metaverse. Moreover, hologram contact lenses which can be placed into eyes are also developed to enable the augmentation of human vision.   |
| Medical ultrasound                         | Kohji MASUDA<br>masuda_k(at)cc.tuat.ac.jp                             | Our research topic is "Ultrasound," which is knowledge of physics and electrical engineering and has a potential to apply to both diagnosis and treatment without harming the human body. In collaboration with medical researchers, we are conducting research themes in various fields such as verification experiments of biological effects caused by ultrasound and information extraction using image processing and machine learning. We are working towards realization of therapeutic technology by combining these achievements. |
| Biomedical sensing                         | Kenji IKUSHIMA<br>ikushima(at)cc.tuat.ac.jp                           | Innovative sensing technologies related to ultrasound and terahertz waves by utilizing our unique measurement schemes and advanced quantum technologies. We aim to visualize information that is inaccessible by conventional technologies and apply it to various fields such as medical diagnosis, cell evaluation, and inspection of food and industrial materials.   |
| Biophysics                                 | Yoshihiro MURAYAMA<br>ymura(at)cc.tuat.ac.jp                          | Biophysics and Soft matter physics. Experimental study on biological function, especially, mechanical properties and rheology of biopolymers and mechanics of microorganism.   |
| Lightwave sensing technology               | Yosuke TANAKA<br>tyosuke(at)cc.tuat.ac.jp                             | Our research deals with multi-function and high-speed optical signal processing, optical sensing systems along with related devices and data processing techniques, which are applied to monitoring artificial structures and biological objects.  |
| Superconducting Materials                  | Akiyasu YAMAMOTO<br>akiyasu(at)cc.tuat.ac.jp                          | Experimental research on superconductivity, superconducting materials, and superconducting application. Especially development of novel strong magnets using new high temperature superconductors for medical and green applications.  |

| <b>Department : Biomedical Engineering</b> |   |   |
|--|---|---|
| Specialty & Major Research Fields          | Academic Advisor                                  | Research Subject  |
| Biomaterials                               | Yuki AKAGI<br>y-akagi(at)go.tuat.ac.jp            | We are developing smart-materials based on chemistry, biology, and material engineering, to meet unmet medical needs. Furthermore, we aim to realize highly efficient/accurate diagnosis and treatment, by combining them with physical energy such as laser or heat.   |
| Biomechanical engineering                  | Daisuke YOSHINO<br>dyoshino(at)go.tuat.ac.jp      | Research for mechanobiology of human health and disease. Development of biomedical devices and medical techniques for vascular diseases.  |
| Biomedical Spectroscopy                    | Terumasa ITO<br>teru-ito(at)cc.tuat.ac.jp         | We develop new optical spectroscopy and imaging methods to analyze small molecules by manipulating the spatio-temporal properties of light. Using these technologies, we elucidate the effects and functions of physiologically active molecules and drugs on living tissues and cells.   |
| Environmental linguistics                  | Yuichi ASAI<br>asai(at)go.tuat.ac.jp              | My major research fields are cultural anthropology, linguistic anthropology, and environmental anthropology. My research focuses on how human language constructs socio-cultural phenomenon and the natural environment. Since 2007, I have engaged in fieldwork in the Fiji Islands, South Pacific, and examined unique characteristics of Fijian ritual and mythical cosmology, through linguistic analysis of Fijian language.   |
| Motor control assistive technology         | Masataka YAMAMOTO<br>myamamoto (at) go.tuat.ac.jp | We aim to realize a system that automatically assesses body functions based on human motion information and proposes effective treatment. In collaboration with medical institutions and medical researchers, we develop 3D motion analysis and motor function recovery prediction system by machine learning and gait video as well as development of wearable training device.  |
| Bioelectronic Materials Engineering        | Kento YAMAGISHI<br>yamagishi(at) go.tuat.ac.jp    | Development of ultrathin and stretchable electronic devices based on polymeric and elastomeric films with thicknesses of only a few micrometers or less, by integrating 3D printing, microfabrication, and various printing technologies. These technologies are further applied to bio-integrated devices for applications such as motion analysis in athletes, implantable cancer therapy systems, gastrointestinal motility monitoring, and the investigation of brain-gut interactions. |

| Mathematical Informatics                                  | Nobuo HARA<br>nhara(at)cc.tuat.ac.jp<br>*Retires in March 2027       | Algebraic geometry and commutative algebra in positive characteristic. In particular, study of algebraic varieties and their singularities via the Frobenius morphism.   |
|   | Mikio MURATA<br>mmurata(at)cc.tuat.ac.jp                             | Discretization and ultradiscretization of differential equations, Cellular automaton, Integrable systems and Painleve equations.   |

| <b>Collaborative Study Fields of Graduate School of Engineering</b>   |  |   |
|---|--|---|
| <p>The following academic study fields aim to activate collaborative study with external research institutes that are celebrated for their excellent research achievements.<br/>           Note: Those who wish to study in any of the collaborative fields should obtain prior guidance from Chair of each department.</p> |  |   |
| <b>Department : Biotechnology and Life Science</b>  |  |   |
| Speciality&Major Research Fields  | Academic Advisor                                     | Research Subject  |
| Nanotechnology-Based Cell Engineering<br>(Cooperation Program with National Institute of Advanced Industrial Science and Technology (AIST))   | Chikashi NAKAMURA<br>chikashi-nakamura(at)aist.go.jp | We develop a new biotechnology, “nanotechnology-based cell engineering”, by using nano/micro-device, nano-probe technologies, and brain organoid technologies to reveal functions of cancer cells, immune cells, neural cells and iPS cells. The findings are applied for practical applications, in next-era cell therapies and diagnostics, e. g. genome editing therapy, liquid biopsy, and neurofunctional assessment method. |
|   | Hyonchol KIM<br>kim-hc(at)aist.go.jp                 |   |
|   | Kazumi HIRANO<br>Kazumi-hirano(at)aist.go.jp         |   |
|   | Ayana YAMAGISHI<br>a-yamagishi(at)aist.go.jp         |   |
| <b>Department : Applied Physics and Chemical Engineering</b>  |  |   |
| Speciality&Major Research Fields  | Academic Advisor                                     | Research Subject  |
| Non-equilibrium Process Engineering<br>(Cooperation Program with Mitsubishi Chemical Corporation)   | Hideto HIDAKA<br>Makoto TAKAYANAGI                   | Most of industrial processing of chemical products is in continuous operation. On the other hand, non-equilibrium process operation is emerged recently. We study the theory and practical methods for unsteady and non-equilibrium processing systems.   |
| <b>Department : Mechanical Systems Engineering</b>  |  |   |
| Speciality&Major Research Fields  | Academic Advisor                                     | Research Subject  |
| Transport Systems Engineering<br>(Cooperation Program with Railway Technical Research Institute)  | Kazuyuki HANDA<br>Hajime TAKAMI<br>Yuki AKIYAMA      | Education and research are carried out, focusing on advanced analysis and design methods to develop higher-speed train systems for future generation: car body design applicable to higher-speed, technologies for lighter car body design and safety improvement. Social needs and problems for future transport systems are analyzed and evaluated.   |

|   |  |  |
|---|--|--|
| Aero Space Engineering<br>(Cooperation Program<br>with National Institute of<br>Japan Aerospace<br>Exploration Agency)  | Takashi AOYAMA<br>Yoshiyasu HIRANO<br>Yoji OKITA<br>Atsushi HASHIMOTO<br>Zyunichi AKATSUKA | Aircraft propulsion engineering, high-speed aerodynamics, structure/materials, aerodynamics/aeroacoustics and rotorcraft concerned with the developments of airplane and spacecraft are studied. In aircraft propulsion engineering, simulation technology of engine system for airplane, heat resistance and cooling technology of high temperature turbine are studied. In the high-speed aerodynamics, flow control at ultrasonic and hypersonic speed on engine intake and hypersonic boundary layer are studied. In the aerodynamics/aeroacoustics and rotorcraft, unsteady CFD on aircraft, non-linear sound propagation/transmission on rockets, and high-speed rotorcraft are studied. In the structure and materials, damage mechanisms of composite structures, and optimization of airframe structures are studied. |
| Traffic Safety Engineering<br>(Cooperation Program<br>with National Traffic<br>Safety and Environment<br>Laboratory, National<br>Agency for Automobile<br>and Land Transport<br>Technology) | Michiaki SEKINE  | The research and education for the development of advanced welfare society is promoted by applying the fundamental studies on symbiotic science and technology. Especially, the research and the education are studied at cooperated laboratories where the social environment foundations of safety in road traffic and social environment are guaranteed, verified and examined.   |
| Human-Robot<br>Cooperation Engineering<br>(Cooperation Program<br>with National Institute of<br>Advanced Industrial<br>Science and<br>Technology(AIST))                                     | Ko AYUSAWA<br>Natsuki YAMANOBE   | Research on cooperation between humans and robots by modeling of human behavior, motion retargeting for robots, and motion generation based on machine learning to realize collaboration and communication with robots.  |
| Automobile prevention<br>safe engineering<br>(Cooperation Program<br>with Japan Automobile<br>Research Institute)   | Hisashi IMANAGA<br>Shinichi TAKAYAMA   | Causation analysis of traffic accidents is a fundamental part of active safety research. Particularly, understanding of driver behavior during pre-crash period is important for developing preventive safety measures or Advanced Driver Assistance Systems (ADAS). Critical events captured by driving data recorder ("DORA-RECO") will be analyzed for the purpose. Instrumented vehicle experiments which reproduce typical pre-crash scenarios will be conducted for developing preventive safety measures.   |
| <b>Department: Electrical Engineering and Computer Science</b>  |  |  |
| Speciality&Major<br>Research Fields   | Academic Advisor   | Research Subject   |
| Advanced Electronic<br>Information System<br>Technology<br>(Cooperation Program<br>with Central Research<br>Laboratory of Hitachi,<br>Ltd)  | Masahiko ANDO<br>LI Yongun   | Optoelectronic Devices,<br>Nanophotonics,<br>Bioinformatics.   |

|  |  |  |
|--|--|--|
| Information-Communication Engineering (Cooperation Program with National Institute of Information and Communications Technology) | Hiroyuki TSUJI<br>Soichi WATANABE<br>Iwao HOSAKO<br>Kentaro FURUSAWA | Education and research for fundamental technologies related with wireless communication HF devices, communication systems, communication environment and electromagnetic wave measurement technologies which support the development of the next-generation information-communication application fields and their key technologies.   |
| Biomedical Electronics (Cooperation Program with RIKEN)  | Hideo YOKOTA<br>Shin YOSHIZAWA<br>Masanobu MURAYAMA                  | Electronics in biomedical engineering related to measurement, signal processing, interfacing, imaging, simulation, and mechatronics.   |
| Fundamentals of advanced intelligence (Cooperation Program with RIKEN)   | Mihoko OTAKE<br>Qibin ZHAO<br>Hiromi ARAI                            | Education and research for fundamental and applied artificial intelligence related to discrete optimization, search and parallel computing, tensor learning, approximate Bayesian inference, cognitive behavioral assistive technology.  |
| Urban Space Informatics (Cooperation Program with National Institute of Advanced Industrial Science and Technology (AIST))       | Akio SASHIMA<br>Fumiya AKASAKA<br>Kanao NAKAJIMA                     | Analysis of Sensory Data, Machine Learning, Mathematical Analysis of Social Simulation, Service Design and Social Implementation. Education and research are carried out for "Urban Space Informatics," the aim of which is to realize utility and safety in urban space and humans living there. The approach is 1) to analyze and understand sensory data of urban space and humans by machine learning with target model, and 2) to explore possible worlds by social simulations with real sensory data. |
| Intelligent Data Engineering (Cooperation Program with Central Research Laboratory of Hitachi, Ltd)                              | Toshio MORIYA  | Research Subject: Artificial intelligence technologies that process and leverage Big-data collected in Internet-of-Things (IoT) environments.  |
